

BEFORE AND AFTER PHOTOS

45 YEAR OLD WOMAN

Problem: cellulite & localised adiposity
Procedure: 1x Med Contour treatment

RESULTS AFTER ONLY ONE TREATMENT!

54 YEAR OLD MAN

Problem: localised adiposity
Procedure: 2x Med Contour treatments

RESULTS AFTER ONLY TWO TREATMENTS!

Results will vary from client to client.

Your Med Contour fat reduction experience is about to begin.

Cellulite, love handles and more... the alternative to liposuction without the surgical risks.

No down time, no recovery time, resume your normal daily activities immediately after your treatment.

- Non-Invasive
- Non-surgical
- Pain-free and comfortable
- No anaesthetic required
- Results can be seen in the first treatment
- No downtime

Med Contour

Unwanted Fat & Cellulite?

The new, safe and effective liposculpture system

Med Contour

Why The Med Contour Treatment Is So Popular

Med Contour treatments are so popular because they are non-invasive and reduce fat and cellulite without the need for surgery or anesthesia. Plus they work! See results in your first treatment! It's the revolutionary liposculpture treatment that effectively reduces fat and cellulite with no downtime and it's completely safe.

How The Med Contour Treatment Works

The unique handpiece uses two angled transmitters to emit very low frequency ultrasound waves while the vacuum suction lifts the skin and allows the transmitters to specifically target the cellulite and fat. The ultrasound action causes a cavitation effect which breaks down the fat cells which are then eliminated naturally by the body.

Results

Results are long-lasting, so long as you maintain a healthy diet and lifestyle. The fat cells are eliminated during your course of treatments, thereby reducing your body's ability to increase in size. However, a diet and lifestyle of poor food choices and indulgence will lead to further weight gain, so it is important to commit to a healthy diet and lifestyle to get the best long term benefits from your liposculpture treatments.

Body Areas

A Med Contour treatment can be performed on any area of the body with the exception of the face and neck. The most popular areas for treatment are the upper and lower abdomen (front and back of the body), flanks/love handles, outer thighs, inner thighs, upper arms (tuckshop arms) and buttocks.

Is The Med Contour Treatment Appropriate For Me?

Med Contour is especially good for those men and women who despite their best efforts, have pockets of fat that no amount of exercise or diet seems to shift. It is also highly recommended for people who are currently losing weight and wish to fast track their weight loss.

performed on left
side only.
Improvement can
be seen immediately
following the first
treatment.*

Long lasting results in minimal time. The revolutionary approach to non-surgical fat removal.

How long does a treatment take & how many are needed?

An average treatment will take between 1-1.5 hours. Only one treatment per week is recommended and a follow up lymph drainage session between cavitation treatments is highly recommended to speed up results. The number of Med Contour treatments will vary from person to person and be largely dependent on the size of the person and the desired results.

After Treatment Care

Following a Med Contour treatment, you can return to your normal daily activities, there is no downtime! In the days following your liposculpture treatment, it is recommended you get adequate sleep and drink plenty of water. Exercise, while not entirely necessary, is highly desirable to stimulate your circulatory and lymphatic systems to remove the toxins released during the treatment.

Please speak to your qualified Med Contour practitioner for more after treatment advice so that you get the most out of your treatments.
